b) i) List out the procedure for converting Binary to Gray Code.	
to convert the following number from one base to att	(4)
iii) What are the different ways to represent a negative number?	
12. a) Design a full subtractor and design and design and design a full subtractor and design and d	(4)
 a) Design a full subtractor and derive expression for difference and Realize the circuit using gates. 	borrow.
(OR)	(16)
 Design a code converter that converts a 8421 to BCD code. Realize the using gates. 	
using gates.	
13. a) Implement the following Boolean function:	(16)
13. a) Implement the following Boolean function with a 4×1 multiplexer and gates. Connect inputs A and B to the selection lines. The input requirement for the four data lines will be a function of variables C and D these variables day expressing F as a function of C and D for each of the forwhen AB = 00, 01, 10 and 11. These functions may have to be implementation of the second property of the second prop	rements dues are
(OR)	(16)
b) Draw a neat sketch showing implementation of Z_1 = ab'd'e + a'b'c'e + Z_2 = a'c'e, Z_3 = bc + de + c'd'e + bd and Z_4 = a'c'e + ce using a 5*8*4 P.	LA (16)
14. a) Summarize the design procedure for asynchronous sequential circuit an illustration of it with a classical example.	t. Give
(OR)	(16)
 Explain the different types of hazards that occurs in asynchronous sequencircuits and Combinational circuits. 	uential
	(16)
ii) Write short notes on Address multiplexing. iii) Briefly discuss the convention.	(8)
ii) Briefly discuss the sequential programmable devices.	(8)
(OR)	
b) i) Implement the following two Boolean functions with a PLA.	(10)
F1 = A B' + A C + A' B C'	
F2 = (AC + BC)'	
ii) Give the Internal block diagram of 4 ×4 RAM.	(6)
Mayros
